

APPENDIX DD

DOCUMENT IDENTIFIER (DI) CODES

A. GENERAL

The DI code is used on all data records. It is a means of identifying the functional area system (transportation, supply), to the related document and the intended purpose of the document (Transportation Control and Movement Document (TCMD), manifest, tracer, or In transit Data Card). The most current versions of the following codes are available at the TMDS web site at: <https://tmds03.scott.af.mil/tmds/>.

B. TCMD AND MANIFEST DIs

1. The DIs for TCMDS and manifests are constructed according to the type of shipment, the type of information contained on the transaction, and whether the transaction is a TCMD or manifest. The first position entry (always a "T") and the second position entry (indicating the type of shipment) are the same on both a TCMD and a manifest. For consolidated shipments, the second position indicates the hazardous potential of the shipment, if any; otherwise the code represents the predominant contents by weight for water and by cube for air. The third position (indicating the type of information on the record) varies between the different types of transactions, i.e., TCMDs, air manifests, and water manifests. The three entries for the three positions are listed sequentially below.

a. Table of TCMD and Manifest DIs.

First Position: Always "T"⁵⁰

Second Position: Type of Shipment (or transaction)

- A Manifest Header (see Paragraph C below, for third position)
- B Accompanied baggage
- C Defense Courier Service
- D Intraservice use only
- E Ammunition and explosives
- F Unaccompanied baggage
- G Mail from postal concentration centers
- H Household goods
- I Reserved
- J Hazardous materials (except ammunition and explosives or consumer commodities ORM-D)
- K In transit data (not a TCMD or manifest document)
- L Dunnage and lashing gear

⁵⁰ The Document Identifier with "R" in the first position is reserved for simulated mobilization exercises. No physical movement of materiel is required. The "R" is for simulation use only.

M	Tracer action (not a TCMD or manifest document)
N	Reserved
O	Reserved
P	Privately owned vehicles
Q	Reserved
R	Reserved
S	Shipment challenge (not a TCMD or manifest document)
T	Reserved
U	Equipment in sets or systems
V	Government vehicles, trailers, wheeled guns, and aircraft
W	Reserved
X	Shipments (including ORM-D) not otherwise covered above
Y	Reserved
Z	Reserved

Third Position: Prime and Trailer Entry Identification

Table DD-1. Table of TCMD and Manifest DIs

Prime Data ATCMD	Air Manifest	Water Manifest	
0	-	J	Prime document for Release Unit shipment (including empty SEAVAN, CONEX, etc.), not in a consolidation container.
1	A	J	Prime document for Less than Release Unit shipment (including empty SEAVAN, CONEX), not in a consolidation container
2	B	K	Prime document (header) for loaded Roll on/ Roll Off (RO/RO), SEAVAN, MILVAN or Air Pallet (463-L).
3	C	L	Prime document (header) for CONEX, Unitized Pallet Load, or other Consolidation Container containing multiple shipment units.
4	D	M	Prime document for shipment units consolidated in a container (CONEX, SEAVAN, MILVAN, 463-L Pallet, RO/RO, or Unitized Pallet Load).
Trailer Data			
5	E	N	Trailer document for cargo with outsize dimensions.
6	F	O	Trailer document for identifying ammunition round count and coding data peculiar to ammunition, explosives, and other hazardous material.
7	G	P	Trailer document for listing the Net Explosive Weight and lot number of ammunition and explosives.
8	H	Q	Trailer document for listing personal property ownership information.
9	I	R	Trailer document for listing miscellaneous information both in general and as specifically identified in Appendix M.

- b. When a TCMD must be corrected or canceled completely, a new TCMD is submitted using the original DI. If the needed correction is in the DI, two new TCMDs must be submitted, one with the old DI to cancel and one with the correct DI. In addition, depending on the TCMD format being used, the following entries are made:
- (1) Automated Record. Corrections or Cancellations. Depending on the computer software package used to generate the TCMD, corrections and cancellations can be electronically transmitted in the same manner as the TCMD.
 - (2) DD Form 1384, Manual TCMD. Corrections or cancellations. Annotate “corrected copy” or “cancellation” (as appropriate) in the remarks section (Block 31).
 - (3) Electrically Transmitted Message. Corrections or cancellations. Add the word “correction” or “cancellation” (as appropriate) to the subject of the message, e.g., TCMD CORRECTION.

C. MANIFEST HEADER DIs

When a TCMD is compiled into a manifest, the “header” entries are made using the following DIs:

<u>Code</u>	<u>Description</u>
TAA	Air manifest header
TAB	Air cargo pallet header
TAJ	Ocean cargo manifest header
TAT	Air Cargo Truck Manifest header (Air Mobility Command (AMC) use only)

D. SHIPMENT TRACING, STATUS, DIVERSION, HOLD, AND DISPOSITION DIs

The first two positions of the DI for tracing, status, diversion, hold and disposition documents are always “TM”. The third position of the DI identifies the type of document as follows:

<u>Code</u>	<u>Description</u>
TM1	Request for transportation status
TM2	Shipment diversion authorization
TM3	Shipment hold authorization
TMA	Transportation status (automated response)
TMB	Diversion confirmation
TMC	Shipment hold acknowledgment
TMJ	Transportation status (abbreviated response)
TMK	Diversion denial
TML	Shipment hold denial
TMS	Disposition instructions
TMT	Disposition request

E. IN TRANSIT DATA CARD DIs

The first two positions of the DI for the submission of in transit data are always “TK.” The third position of the DI identifies the activity preparing the document and type of data it contains. The DI is selected from the following list:

<u>Code</u>	<u>Description</u>
TK1	Prepared by initial intratheater airlift terminal showing hour/day shipment unit is received and forwarded.
TK2	Prepared by intermediate intratheater airlift terminal showing hour/day shipment unit is received and forwarded.
TK3	Prepared by final intratheater airlift terminal showing hour/day shipment unit is received and delivered to the Continental United States (CONUS) consignee.
TK4	Prepared by shipping activities showing in transit data on Bill of Lading shipments within CONUS, shipments to domestic consignees, and overseas intratheater and retrograde shipments.
TK6	Prepared by AMC Aerial Port of Debarkation (APOD) showing hour/day shipment unit is received at an APOD and forwarded to the ultimate consignee.
TK7	Prepared by the Military Traffic Management Command Operations Center or Ocean Cargo Clearance Authority (OCCA) showing hour/day each export shipment unit is received/lifted from the CONUS by the Military Sealift Command. The OCCA entries include the date of overseas vessel discharge.
TK9	Prepared by the Water Port of Debarkation (WPOD), this format indicates the receipt (day of year) at the WPOD to vessel discharge (day of year) at the WPOD.

APPENDIX EE

ESTIMATED TIME OF ARRIVAL (ETA)

A. GENERAL

The ETA code is used by shippers to indicate the number of days a shipment will be in transit from the consignor to a Port of Embarkation (POE). Using the ETA code and the date shipped code, the POE is able to determine when the shipment should arrive. The most current versions of the following codes are available at the Table Management Distribution System website at:
<https://tmds03.scott.af.mil/tmds/>.

VESSEL STATUS AND TERMS OF CARRIAGE CODES

A. GENERAL

The vessel status code identifies the type of shipping and payment agreement for a particular voyage while the terms of carriage code indicates who is responsible for vessel loading and unloading. The codes are used for statistical summaries, contractor payments, cost accounting, vessel operator billing, and related financial purposes. Container service codes that supplement the vessel status and terms of carriage codes are shown in position 15 and 16 of the Transportation Control Number as explained in Appendix L, Paragraph J. The most current versions of the following codes are available at the Table Management Distribution System website at: <https://tmnds03.scott.af.mil/tmnds/>.

VESSEL SUSTAINING CODES (VOYAGE ITINERARY POINT SELF SUSTAINABILITY CODE)

A. GENERAL

The vessel sustaining code indicates the physical capability of the ship's gear to discharge the cargo on board regardless of the vessel terms of carriage. This code is used only on the ocean manifest header cards. The most current versions of the following codes are available at the Table Management Distribution System website at: <https://TMDS03.scott.af.mil/tmds/>.

B. CODES

Select a code from the following:

<u>Code</u>	<u>Description</u>
2	Vessel Is Self-Sustaining
3	Vessel Is Not Self-Sustaining, Requires Dock-Side Offloading Equipment

WATER COMMODITY CODES

A. GENERAL

The water commodity, type cargo, and special handling codes are a five-position combination. This combination is obtained using Appendices KK, LL and NN. The first three positions of the code identify the commodity (Appendix KK). The fourth position further identifies certain types of cargo, primarily those that are hazardous (Appendix NN) and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling (Appendix LL). The specific special handling requirements are further identified in trailer data, e.g., actual temperature control range, type of hazardous materiel, or outsize dimensions.⁵² The most current versions of the codes are available at the Table Management Distribution System website at:

<https://TMDS03.scott.af.mil/tmds/>.

B. COMMODITY

1. The first three positions of the five-position code indicate the commodity.
 - a. If a shipment unit is composed of items having different commodity codes, the code representing the greatest volume (cube) is used. When the items and commodities are so numerous no single code is dominant, a generalized code is used. These generalized codes include “NOS” (Not Otherwise Specified) in the explanation.
 - b. Whenever an “NOS” commodity code is used, an additional explanation is always included as a trailer entry using DI T_9. This explanation is not a reiteration of the description shown in this paragraph (e.g., Subsistence, NOS; General, NOS), but may be a clear text description such as ‘Exchange Resale Items – Consolidated.’ Certain of these items are described in specific detail as required by Appendix M.
 - c. Water commodity codes are grouped by general categories. These categories are alphabetically listed below along with the code groups, which may be used to determine a specific commodity code from the numeric listing in Table KK-1 and Table KK-2.

Table KK-1. Water Commodity Codes/Categories

Code Group	Commodity Category
900	Aircraft, unboxed
670-676	Aircraft parts

APPENDIX LL

WATER SPECIAL HANDLING CODES

A. GENERAL

The water commodity and special handling codes are a five-position combination. The first three positions of the code identify the commodity. The fourth position further identifies certain types of cargo and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling. The specific special handling requirements are usually further identified in trailer data, e.g., actual temperature control range, type of hazardous materiel, or outsize dimensions.

B. COMMODITY

1. The first three positions of the five-position code indicate the commodity.
 - a. If a shipment unit is composed of items having different commodity codes, the code representing the greatest volume (cube) is used. When the items and commodities are so numerous no single code is dominant, a generalized code is used. These generalized codes include "NOS" (Not Otherwise Specified) in the explanation.
 - b. Whenever an "NOS" commodity code is used, additional explanation is always included as a trailer entry using DI T_9. This explanation is not a reiteration of the description shown in this paragraph, e.g., subsistence, NOS; General, NOS, but may be a clear text description such as "Exchange Resale Items – Consolidated." Certain of these items are described in specific detail as required by Appendix M.

C. SPECIAL HANDLING

The fifth position of the five-position code indicates those items that require special handling as a result of their size (outsized, any dimension exceeding six feet), weight (heavy lift, any piece 10,000 pounds or more), or need for security (classified or protected). (Note: Outsize and heavy lift refer to a single piece in its shipping configuration whether packaged, palletized, unitized, or containerized, but exclude SEAVANs and MILVANs themselves. Using column (1) for items with a single handling condition and columns (2), (3), and (4) for multiple handling conditions; select a code from Table LL-1:

Table LL-1. Water Special Handling Codes

Special Handling Requirement	Single Handling Condition/Code	Multiple Handling Conditions		
		Heavy Lift (HL)	Outsize Dimension (OD)	HL and OD

Special Handling Requirement	Single Handling Condition/Code	Multiple Handling Conditions		
		Heavy Lift (HL)	Outsize Dimension (OD)	HL and OD
Highest Sensitivity Category II Classification Confidential Note A	8	H	Q	Y
Other (Note B) or No Special Handling Required except I, R, or Z	9	I	R	Z

Note A: Mandatory trailer entry (T_9) required to identify level of classification (Secret or Confidential) and or degree of risk category

Note B : Mandatory trailer entry (T_9) required to identify cases such as classified but not sensitive (DOD 5200.1R, Information Security Program) shipments, protected pilferable, protected controlled, or other security requirements required by Service/Agency directives.

Code Description

- 2 Highest sensitivity, Category I: Arms, Ammunition and Explosives. These items are not classified. Manportable missiles and rockets in a ready-to-fire configuration. WATER PORT IDENTIFIER CODES (WATER PORTS)

A. GENERAL

These codes identify water ports worldwide. The code representing the actual Water Port of Embarkation and Water Port of Debarkation is used on all Defense Transportation System documentation for water shipments. The most current versions of the following codes are available at the Table Management Distribution System website at: <https://tmds03.scott.af.mil/tmds/>.

B. CODE STRUCTURE

1. The water port codes are based on the geographic location of the port. The letters used in the first two positions of the three-position code are generally assigned in alphabetic order, following the coastline. The first position of the three-position code represents the major geographic area in which the port is located. These geographic areas are described in detail in Paragraph 2, below. The second position in the code represents a subarea within the major geographic area. The third position in the code represents the specific port, port area, or island within the subarea.
2. Major Geographic Areas. Table MM-1 identifies the major geographic regions of the world and the code associated with each. This code is the first position of the water port identifier code and should assist in locating the specific port code.

APPENDIX NN

WATER TYPE CARGO CODE

A. GENERAL

The water commodity, type cargo, and special handling codes are a five-position combination. This combination is obtained using Appendices KK, LL and NN. The first three positions of the code identify the commodity (Appendix KK). The fourth position further identifies certain types of cargo, primarily those that are hazardous (Appendix NN) and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling (Appendix LL). The specific special handling requirements are usually further identified in trailer data, e.g., actual temperature control range, type of hazardous materiel, or outsize dimensions. The most current versions of the codes are available at the Table Management Distribution System website at:

<https://tmds03.scott.af.mil/tmdu/>.

B. COMMODITY

1. The first three positions of the five-position code indicate the commodity.
 - a. If a shipment unit is composed of items having different commodity codes, the code representing the greatest volume (cube) is used. When the items and commodities are so numerous no single code is dominant, a generalized code is used. These generalized codes include “NOS” (Not Otherwise Specified) in the explanation.
 - b. Whenever an “NOS” commodity code is used, additional explanation is always included as a trailer entry using DI T_9. This explanation is not a reiteration of the description shown in this paragraph (e.g., Subsistence NOS; General, NOS), but may be a clear text description such as “Exchange Resale Items - Consolidated.” Certain of these items are described in specific detail as required by Appendix M.

C. TYPE CODE

The fourth position of the five-position code identifies certain types of cargo, primarily those, which are hazardous. (When two or more codes apply to a shipment unit, the type of cargo code representing the greatest hazard (in the order of hazards from 49 CFR, when applicable) is used. An in-the-clear description of other applicable type of cargo codes is included in miscellaneous information trailer data (DI T_9). For example: A shipment “subject to damage from heat” and a “Poison Class B” is coded with a “P” for type cargo and “subject to damage from heat” is entered as miscellaneous trailer data (DI T_9).) Select a code from the following:

<u>Cargo Code</u>	<u>Description</u>
1	Aircraft engine internal combustion engines and fuel control devices
2	Type cargo code not applicable (for Air Force internal use)
3	Electronic Sensitive Device (ESD) (see Definitions)
